

Light Towers

Portable light towers are equipped with four 1000-watt metal halide lamps to help provide a large area of coverage. Aluminum reflector housings and tempered impact-resistant, twist-lock connections provide protection and increased durability.

The tower is designed for easy extension with dual, hand-operated winches with a patented automatic safety brake. The mast extends 12-30 feet and can be retracted and stowed horizontally for travel. With the outriggers extended and all jacks down, the light tower can withstand winds up to 65 mph.

Specs	
Height	71"
Length	172"
Ship Weight	1969 lbs.
Width	57"
Fuel Tank Capacity	30 gal.
Generator Output	6 K W
